

# Resusci<sup>®</sup>Anne CPR-D

---

*Quality CPR combined with the use of live defibrillators  
(manual or automatic) for maximum realism*

**The Resusci Anne CPR-D is an adult CPR training manikin focusing on performance and skill in CPR and defibrillation actions during the scenario. The combination of the Micro-Heartsim and SkillReporter™ modules allows comprehensive instructor-to-student debriefing and documentation of key events. Additionally, first aid and extrication practice can be incorporated into the learning by adding the optional first aid and rescue limbs.**

---

## ***Product benefits:***

- Educationally effective by focusing on the performance level of key CPR and defibrillation skills and techniques
- Cost efficient through easy to use and maintain disposable airways and reusable faces
- Realistic full-body anatomy and landmarks provide the essential features necessary to learn realistic victim handling and quality adult CPR and defibrillation skills
- Enhanced student motivation through use of the optional SkillReporter and Micro-Heartsim modules, allowing both realtime CPR performance feedback and added cardiac rhythm introduction during training. A comprehensive performance report for after-action instructor-to-student debriefing may also be printed
- Modular design allows various limbs to be attached to enhance training

## ***Product features:***

- Natural obstruction of the airway allows students to learn the important technique of opening the airway so that in a real-life situation they know how to effectively administer air to the victim
- Head tilt/chin lift and jaw thrust allow students to correctly practice airway maneuvers necessary when resuscitating a real victim
- Occluded airway with hyperextension stresses proper head position
- Realistic resistance for chest compression allows the students to experience the amount of pressure needed to perform proper chest compressions in a real-life situation
- Anatomically correct landmarks and sternal notch allow the student to practice identification of all anatomical landmarks relevant to adult CPR and defibrillation
- Articulating arms, legs, and head allow realistic weight and handling of an adult
- Automatic carotid pulse simulation synchronized with ECG to realistically check for pulse
- Disposable non-rebreathing airways are suitable for use by more than one student during class and are quick and easy to change after each training session
- SkillReporter CPR performance module provides immediate objective feedback on ventilation duration and volume, compression depth, and hand position, and allows a comprehensive printed report for student performance documentation and debriefing
- Micro-Heartsim module allows manual introduction of cardiac rhythms to the scenario as well as logging critical events including call for help, checked breathing, and arrival of defibrillator
- Removable/reusable faces allow each student to have their own mouth-to-mouth face and offer easy after class cleaning and sanitation
